## I. Procurement Items

### I-1. Prohibited Chemical Substances

Sections I-1-(1) list the chemical substances prohibited to be contained in procured items (finished products, parts and materials, packaging materials) and their maximum allowable concentration (threshold values). If multiple thresholds are written in a single threshold field, all of them must be satisfied.

(※2) The GWP of mixtures containing fluorinated greenhouse gases shall be calculated in accordance with Annex IV of (EU) No 517/2014 .

Notes:

(1) Intentionally added:

Intentionally added means that the corresponding substance or compound including the corresponding substance is intentionally added during manufacturing process, etc., irrespective of quantity.

Ordinary impurities do not fall under this category.

The substance, for which “Intentionally added” is written in its threshold field, must not be intentionally added.

(2) Commission Regulation (EU) No 276/2010 defines a concentration limit of 0.1% by weight of tin in the article or part thereof. Likewise Commission Decision 2009/251/EC defines a concentration limit of 0.00001% by weight of DMF in the product or part of the product and Commission Regulation (EC) No 552/2009 defines a concentration limit of 0.1% by weight of PFOS in the semifinished product or article or part thereof. Because no legal definition of part is provided in these legislations, the most potentially restrictive concentration limit is not adequately specified. Therefore, the concentration limit is applied at the level of a material vs. a part to ensure disclosure of the regulated substances for the most basic unit of a part.

(3) Regulatory thresholds for substances in these applications are based on emission or exposure limits rather than the concentration in the product. The regulatory limit is:

Radioactive substances -a dose rate exceeding  $1 \mu\text{Sv h}^{-1}$  at a distance of 0,1 m

Because emission and exposure levels cannot be derived from actual concentration, a threshold level of "intentionally added" is indicated for reporting. Suppliers may choose to report a default concentration of 0.1% by weight in the product for these substances, in lieu of determining the exact concentrations in their products, to indicate that the substance is known to be present in their product, as the actual concentration in the product is not informative for regulatory compliance assessment.

- (4) The European Community's ban applies to azocolourants and azodyes that by reductive cleavage of azo groups may release one of the 22 aromatic amines listed. The threshold level given applies to these amines, not to the azocolourants and azodyes.
- (5) A printed wiring board laminate refers to the layered board materials excluding surface finishing and components
- (6) HBCD is also referred to as HBCDD. HBCD and HBCDD are the same substance.
- (7) Regulatory thresholds for substances in these applications are based on emission or exposure limits rather than on the concentration in the product. Examples of regulatory limits are:
  - Formaldehyde in hardwood plyboard with veneer core – 0.05 ppm (measured as gaseous emission from product)

Because emission and exposure levels cannot be derived from actual concentrations, a threshold level of "intentionally added" is indicated for reporting.

- (8) However, the use of arsenic is conditionally permitted when their substitutions are not available currently because of material technology and they are technically and scientifically essential to maintain the optical performance required in product designing.
- (9) PFOA related substances refer to substances (including its salts and polymers) having a linear or branched perfluoroheptyl group with the formula  $\text{C}_7\text{F}_{15}$ - or perfluorooctyl group with the formula  $\text{C}_8\text{F}_{17}$ - ,as one of the structural elements. The following substances are excluded.
  - $\text{C}_8\text{F}_{17}\text{-X}$ , where  $\text{X} = \text{F}, \text{Cl}, \text{Br}$ .
  - $\text{C}_8\text{F}_{17}\text{-C(=O)OH}$ ,  $\text{C}_8\text{F}_{17}\text{-C(=O)O-X'}$  or  $\text{C}_8\text{F}_{17}\text{-CF}_2\text{-X'}$  (where  $\text{X'}$ =any group, including salts).

## Annex 1. Applications exempted from the RoHS Directive Annex III

The following table lists the applications exempted from the RoHS Directive as of February 5, 2019. As a principle, these applications are exempted from Section I-1, "Prohibited Chemical Substances".

However, the Annex to RoHS Directive is subject to continual revision, and suppliers should be responsible for ensuring that they refer to the latest version when necessary.

#### Notes:

- (1) Formerly known as EICTA
- (2) Now part of TechAmerica
- (3) A laminated printed wiring board refers to the layered board materials excluding surface finishing and components
- (4) Intentionally added: It means that the corresponding substance or compound including the corresponding substance is intentionally added during manufacturing process, etc., irrespective of quantity. Ordinary impurities do not fall under this category. The substance, for which "Intentionally added" is written in its threshold field, must not be intentionally added.
- (5) Regulatory thresholds for substances in these applications are based on emission or exposure limits rather than on the concentration in the product. The regulatory limits are:
  - Nickel released from the parts coming into direct and prolonged contact with the skin : 0,5 µg/cm<sup>2</sup>/week (Based on DIN EN 1811)

Because emission and exposure levels cannot be derived from actual concentrations, a threshold level of "intentionally added" is indicated for reporting. Suppliers may choose to report a default concentration of 0.1% by weight in the product for these substances, in lieu of determining the exact concentrations in their products, to indicate that the substance is known to be present in their product, as the actual concentration in the product is not informative for regulatory compliance assessment.
- (6) Nickel must be reported in certain regulated applications where it is likely to result in prolonged skin exposure (e.g., an outer enclosure for a portable electronic product designed to be carried). Use of nickel or nickel contained in components and parts designed to be located inside the outer enclosure of a product need not be reported.
- (7) According to the judgement of European Court of Justice on September 2015, in principle the denominator of the threshold (control value) would be a part or material constituting the product.

## I-2-(2) SVHCs of REACH Regulation

SVHCs of REACH Regulation are subject to continual addition, and suppliers should be responsible for always ensuring that they refer to the latest version. The following table lists the SVHCs as of January 20, 2019. Refer to the following ECHA website for the latest SVHCs information.

<http://echa.europa.eu/web/guest/candidate-list-table>

**Notes:**

- \* No.11: Alkanes, C10-13, chloro (Short Chain Chlorinated Paraffins) is abbreviated to SCCPs. Here, the short chain corresponds to carbon number 10 to 13 (as the medium chain and long chain correspond to carbon number 14 to 19 and 20 to 30, respectively). SCCPs are a persistent and high-bioaccumulative substance used for various purposes because it has flame retardant properties, plasticity, lubricating properties in metallic processing, and hydrophobicity.
- \* No.67: Refractory Ceramic Fibers, Zirconia Aluminiumsilicate are fibers covered by index number 650-017-00-8 in Annex VI, part 3, table 3.1 of Regulation (EC) No 1272/2008 of the European Parliament and of the Council of December 16, 2008 on classification, labelling and packaging of substances and mixtures, and fulfil the three following conditions:
  - a) oxides of aluminium and silicon are the main components present (in the fibers) within variable concentration ranges
  - b) fibers have a length weighted geometric mean diameter less two standard geometric errors of 6 or less micrometres ( $\mu\text{m}$ )
  - c) alkaline oxide and alkali earth oxide ( $\text{Na}_2\text{O}+\text{K}_2\text{O}+\text{CaO}+\text{MgO}+\text{BaO}$ ) content less or equal to 18% by weight
- \* No.68: Refractory Ceramic Fibers, Aluminosilicate are fibers covered by index number 650-017-00-8 in Annex VI, part 3, table 3.1 of Regulation (EC) No 1272/2008 of the European Parliament and of the Council of December 16, 2008 on classification, labelling and packaging of substances and mixtures, and fulfil the three following conditions:

- \* No.81,82,83,84 are identified as SVHCs in case [ with  $\geq 0.1\%$  of Michler's ketone (EC No.202-027-5) or Michler's base (EC No.202-959-2)].
- \* No.105 is identified as a SVHC in the following case:
  - with lead (Pb) content above the applicable generic concentration limit for 'toxicity for reproduction' Repr.
  - 1A (CLP) or category 1 (DSD); the substance is a member of the group entry of lead compounds, with index number 082-001-00-6 in Regulation (EC) No 1272/2008

\* No.144 are substances with a linear and/or branched alkyl chain with a carbon number of 9 covalently bound in position 4 to phenol, ethoxylated covering UVCB- and well-defined substances, polymers and homologues, which include any of the individual isomers and/or combinations thereof
