

Vulnerability Information Disclosure Policy

Nikon-Trimble handles vulnerability information related to its products in the following manner:

1.Obtaining vulnerability information

We collect vulnerability information through information released by external organizations, reports from suppliers, and reports from customers via vulnerability reporting forms.

2.Vulnerability verification

We will identify the products supported by Nikon-Trimble that are affected by the vulnerability and assess its severity. We will also determine the root cause and conduct a detailed investigation as necessary.

3.Vulnerability response

We will consider measures to remediate vulnerabilities or mitigate the impact of potential exploitation. Based on the outcome of this assessment, we will implement appropriate actions, including developing patches, performing upgrades, preparing documentation, and making configuration changes.

4.Information disclosure

Information on remediated vulnerabilities will be published in the form of security advisories. The publication method will vary depending on the nature of the vulnerability. The timing of publication may be adjusted in coordination with third-party organizations.

5.Subsequent actions

will disclose information and post security patches on its website under " [Product Vulnerability Information](#) " as needed.
